"A smile is a curve
that can set a lot
of things straight."

—DARBY LONDON KAISER, DDS

Dr. Kaiser's 17 years of clinical experience and thoroughly detailed approach to cosmetic dentistry allows her to offer a full spectrum of preventive treatments and cosmetic, restorative options worth smiling about to those in Orange County, California. "Combining the likes of bonding, veneers, crowns and whitening procedures with my creative, artistic approach helps patients attain realistic results that revitalize not just their smiles, but their self-esteem, too."

Incorporating the use of diagnostic dental technology that assists in the early detection of cavities and the removal of hard stains, Dr. Kaiser goes beyond just the aesthetics to achieve a healthier dentition. "Our patients appreciate our keen attention to detail and efficiency. I enjoy taking a personal interest in each one of my patients, because it allows for more resourcefulness and originality." Such ingenuity is exemplified through her conservative yet artful chair-side techniques as well. "Whether the patient is a child with a broken front tooth or an adult with discolored or misshapen teeth, it's possible to change an entire smile with just a small amount of bonding. People are often amazed by the results. Bonding is a quick, painless, artistic means for improving the appearance of discolored, chipped or misaligned teeth."

Employing a cooperative, team-based approach, Dr. Kaiser regularly partners with dental specialists—such as periodontists, oral surgeons and orthodontists—to provide for more coordinated, extensive dental care. "Patients appreciate our collaborative efforts, which enable them to minimize scheduling inconveniences while maximizing their visits. It's rewarding to see my patients smile—literally."

DR. DARBY KAISER

WHAT ATTRACTED YOU TO COSMETIC DENTISTRY It comes naturally to me **FAVORITE PART OF YOUR JOB** I especially enjoy bonding because of the artistic expression involved **ANTI-AGING ADVICE** Whitening your teeth can help you look and feel years younger than you really are **RIGHT NOW I'M READING** The Tipping Point by Malcolm Gladwell **I START EACH DAY** With a cup of coffee and a prayer **I'M NEVER WITHOUT** A positive attitude

SOPHISTICATED SOLUTIONS

The invention of **DIVINE AESTHETIC SOLUTIONS**, a digital-imaging advancement created by Dr. Kaiser, helps her determine critical tooth dimensions like shape, width, length, angles and design upon devising restorative treatment plans. "This innovative technique allows me to take pictures of patients' mouths and visually represent changes we could make to their teeth and gum lines. Not only is it painless and modern; it's convenient and resourceful, too." Prior to developing the **PERMANENT RESTORATIONS**, however, Dr. Kaiser forms a precise model of the newly designed teeth so the patient can evaluate their new smiles. "I try to eliminate any potential surprises. The temporary models help demonstrate my consciousness and commitment to high-quality dental care." When helping patients decide how to approach their smile makeovers, Dr. Kaiser factors in eye shape, mouth curves, skin tone as well as her patients' expectations to further help determine **TOOTH PROPORTIONS**. "I want patients to be involved in every aspect of their smile designs. I listen carefully to their goals and desires, because the ultimate outcome of a perfect smile is a satisfied patient."
